The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinogathy. The present sequence is a DNA sequence which encodes the novel isolated human protein 9389 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating subject having tumorigenic disorder or angiogenic disorder caused by aberrant polypeptide e.g., N-formylpeptide receptor or nucleic acid, by administering a modulator.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon CC cancer-associated nucleic acid molecules (N) and proteins (P), where the CC proteins are collectively known as colon cancer antigens. The colon CC cancer antigens have cytostatic activity and can be used in gene therapy CC and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For CC example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids CC into a host cell and culturing the cell to express the proteins. N and P CC can be used in the prevention, diagnosis and treatment of colorectal CC carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 vx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatheroscierotic, cardiant, CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, CC antiathmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC associated with a NOVX protein in humans and for treating a pathology CC associated with the human disease. NOVX nucleic acids, proteins and CC associated with the human disease. NOVX nucleic acids, proteins and CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis, CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis, CC disorders, neoplasm, lymphoma, uterus cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, cancer associated cachexia, cancer, allows, bronchial asthma, Cronn's disease, multiple sclerosis, CC disorders, disease, anorexia, cancer associated cachexia, cancer, allows, and metabolic confectious disease, parkinson's disease, immune disorders, decreased to ACC62346 to ACC62346 represent FCR primers and probes for human NOVX sequences, which are used in examples from the present invention.

CC ARS4277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Total number of hits satisfying chosen parameters:
          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 1

US-09-819-993-1

; Sequence 1, Application US/09819993

; Patent No. 6436692

; GENERAL INFORMATION:
   APPLICANT: GONG, Fangcheng et al.
   TITLE OF INVENTION: ISOLATED HUWAN ENZYME PROTEINS, NUCLEIC
   TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN ENZYME PROTEINS, AND USES
   TITLE OF INVENTION: THEREOF
   FILE REFERENCE: CL001195

; CURRENT APPLICATION NUMBER: US/09/819,993

; CURRENT APPLICATION NUMBER: US/09/819,993

; CURRENT FILING DATE: 2001-03-29

; NUMBER OF SEO ID NOS: 5

; SOFTWARE: FastSEQ for Windows Version 4.0

; SEO ID NO

; LENGTH: 2002

; TYPE: DNA

ORGANISM: Human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
Sequence 3, Application US/10193295
Patent No. 6620608
GENERAL INFORMATION:
APPLICANT: GONG, Fangcheng et al.
TITLE OF INVENTION: ISOLATED HUMAN ENZYME PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN ENZYME PROTEINS,
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CL001195DIV
CURRENT APPLICATION NUMBER: US/10/193,295
CURRENT APPLICATION NUMBER: 08/819,993
PRIOR APPLICATION NUMBER: 08/819,993
PRIOR FILING DATE: 2001-03-29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TITLE OF INVENTION: ISOLATED HUMAN ENZYME PROTEINS, NUCLEIC
